FIGURE 7D

Figure 1 is a line graph showing the concentration of cA2 IgG (µg/mL) over time (days) for 15 different subjects. The Y-axis ranges from 0 to 150 µg/mL, and the X-axis ranges from 0 to 30 days. Most subjects show a peak in cA2 IgG concentration between days 10 and 20, followed by a decline. The data points are connected by lines, and the lines are labeled with subject numbers.
